

# MACHETE™

## LINEAR OSCILLATING HYDRO-EXCAVATION NOZZLE

**DEMAND POWER.  
COMMAND PRECISION.**

**SUPERIOR PERFORMANCE** – The Machete™ blasts a 0-degree water stream that oscillates at an optimal speed creating a 15-degree wedge of powerful flow. This will allow you to dig faster in the hardest and most compact soil types. By harnessing the power of a straight tip nozzle while oscillating, it creates a superior tool for trenching capabilities.

**RUGGED & REPLACEABLE** – This heavy duty, high impact nozzle is constructed of a stainless-steel housing and tungsten carbide wear surface. Lab validated to outlast other Hydra-Flex nozzles, the Machete can withstand harsh environments and provides a longer run than ceramic nozzles. The Machete also comes with a replaceable nylon cover that allows for instant changeability while increasing the overall core nozzles' life cycle.

**SAFETY** – The unique oscillation design of the nozzle helps reduce undermining that may occur when using traditional rotating nozzles ensuring the operator's safety. Continued use of the non-conductive cover on the nozzle body protects users and sensitive underground utilities.

**EFFICIENCY** – Whether it's trenching or cutting through compact soils, the Machete acts as a finishing tool for any job. With a controlled oscillation that is faster than traditional nozzles, it allows you to save even more water.
